

Energy Trend Project

AUTHOR

Bryan Depew

##Mission Statement:

Clean and utilize U.S Energy Information Administration data to uncover and clearly communicate trends in energy production across natural gas, coal, petroleum/oil, and biomass/waste energy sectors. Apply findings to geospatial state polygons (tigris package) to emphasize regional differences and fluctuations in energy use and production.

Loading necessary packages and setting energy categories of interest

► Code

Create and filter dataset of power plants and their energy sectors

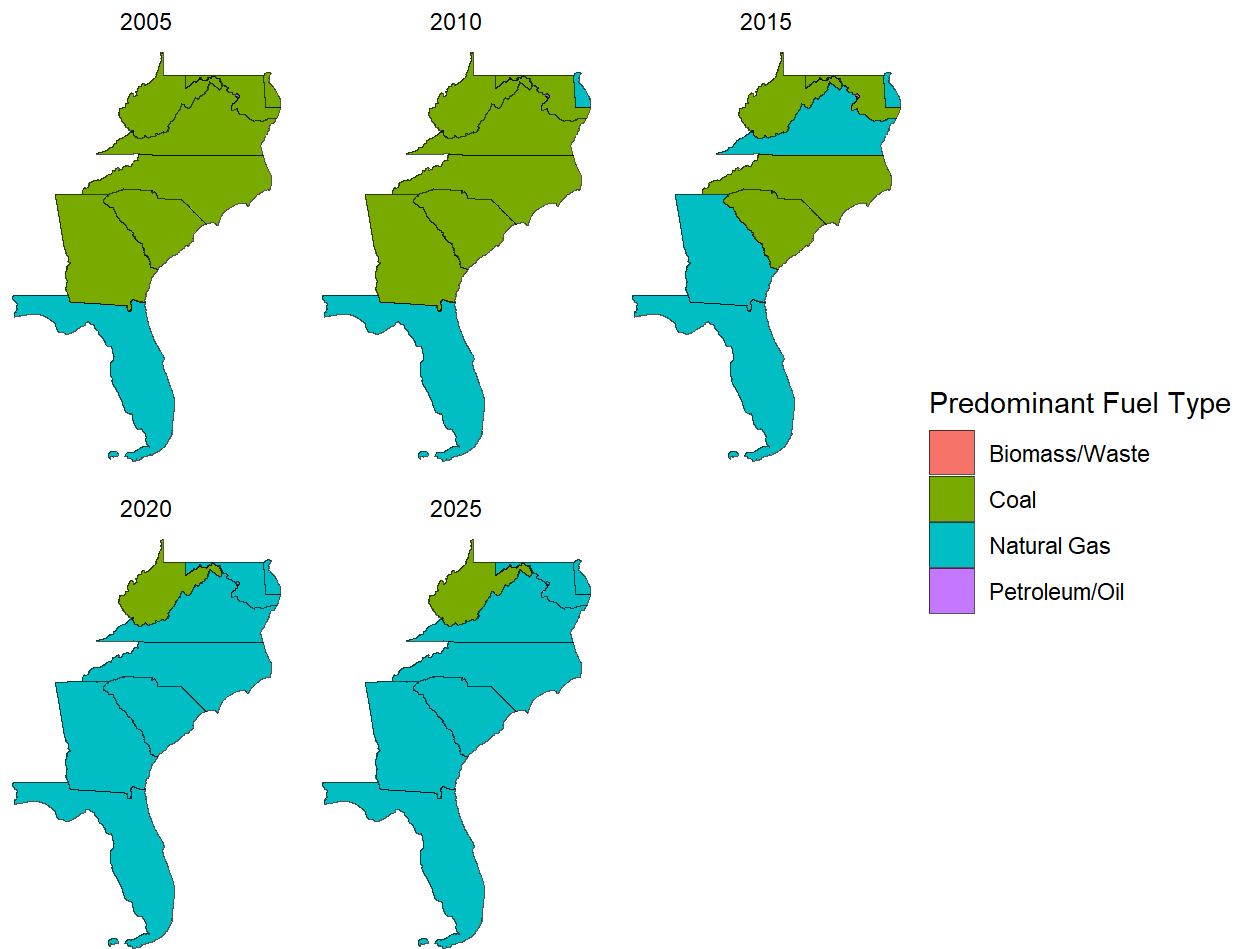

► Code

#Create, modify, and clean data set of states and their corresponding energy production by sector. Identify predominant fuel type by state and year.

► Code

##Create geospatial map of findings

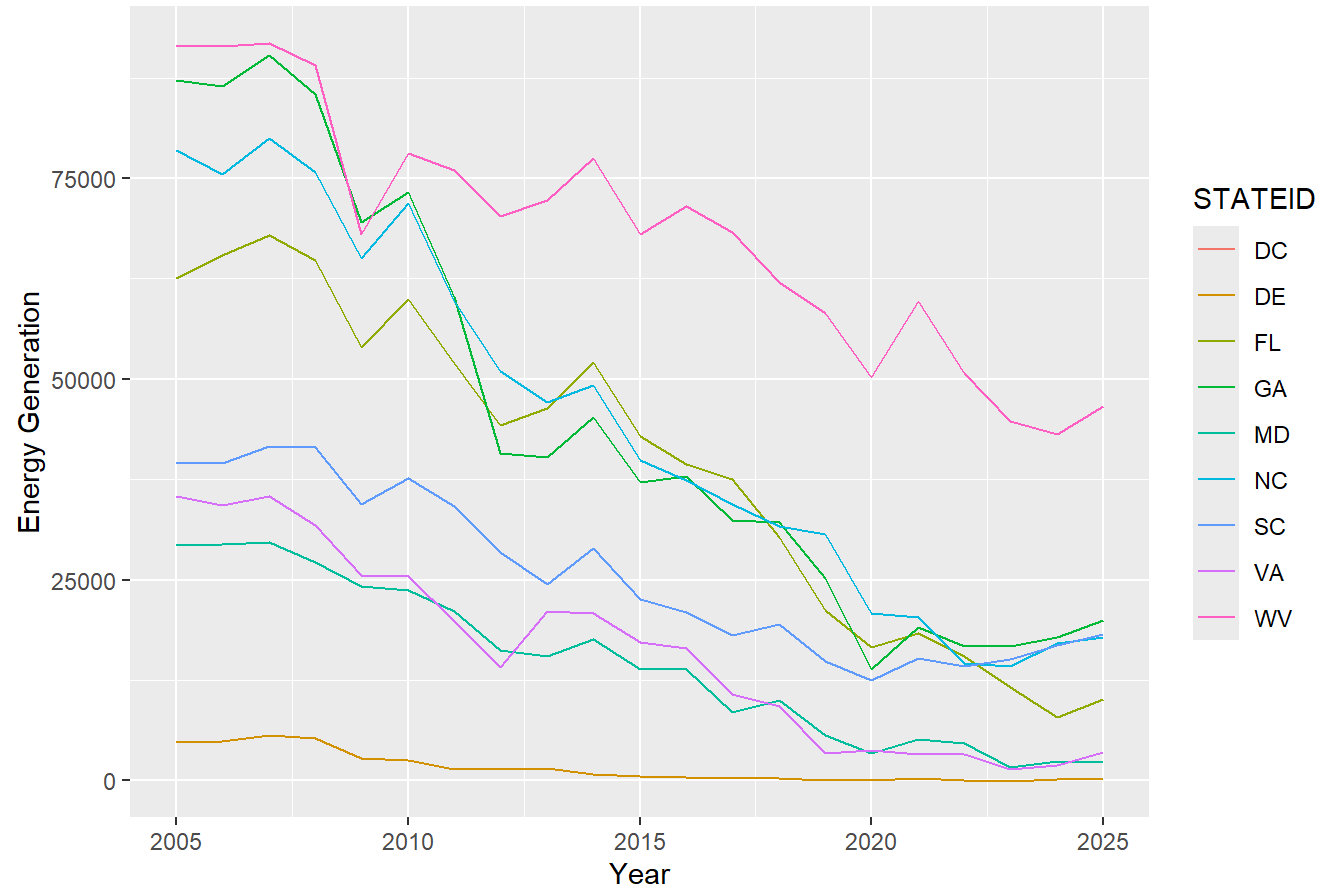

► Code

##Communicate trend of energy production over time by sector

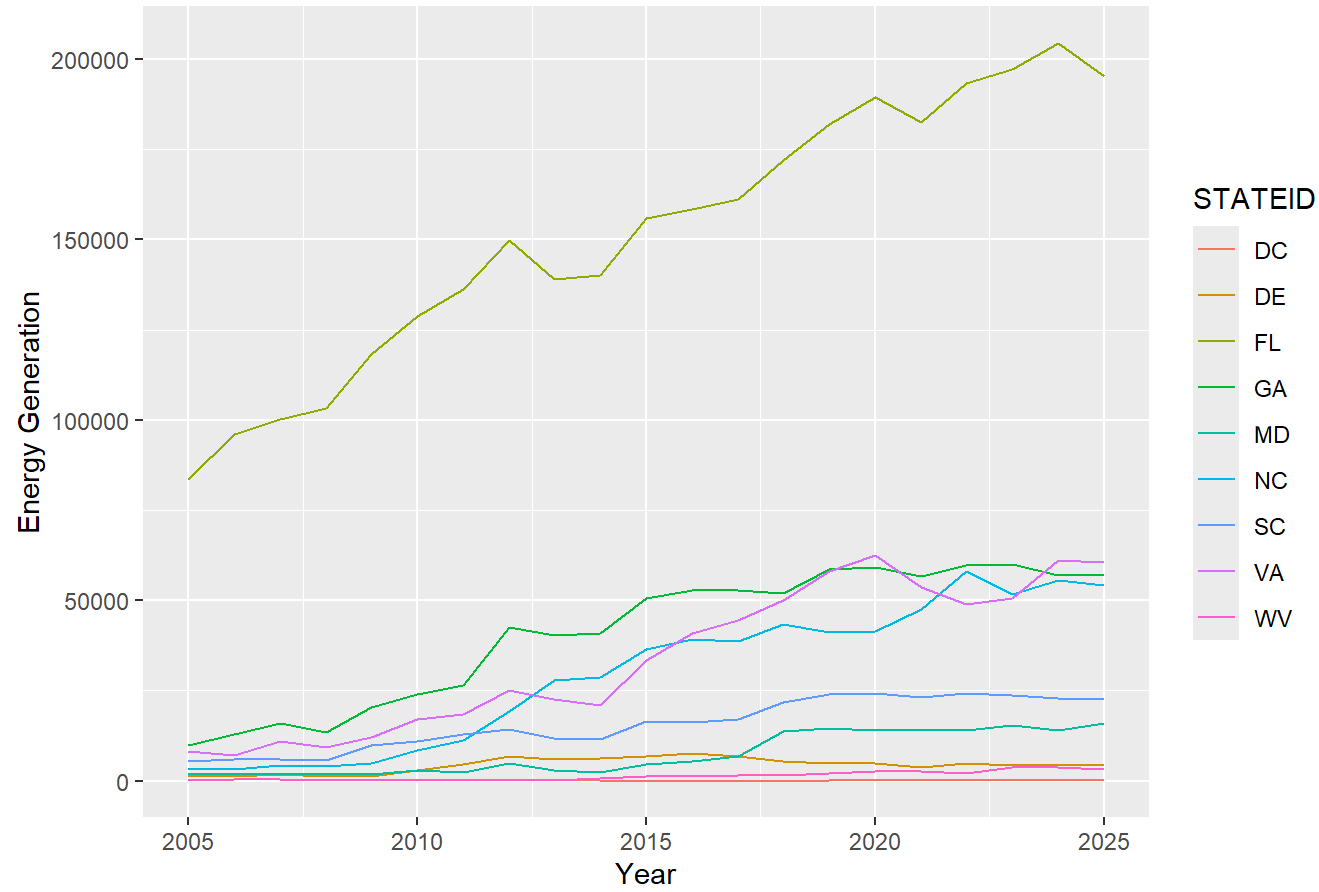

► Code

Coal Energy Generation by State (in thousand megawatthours)

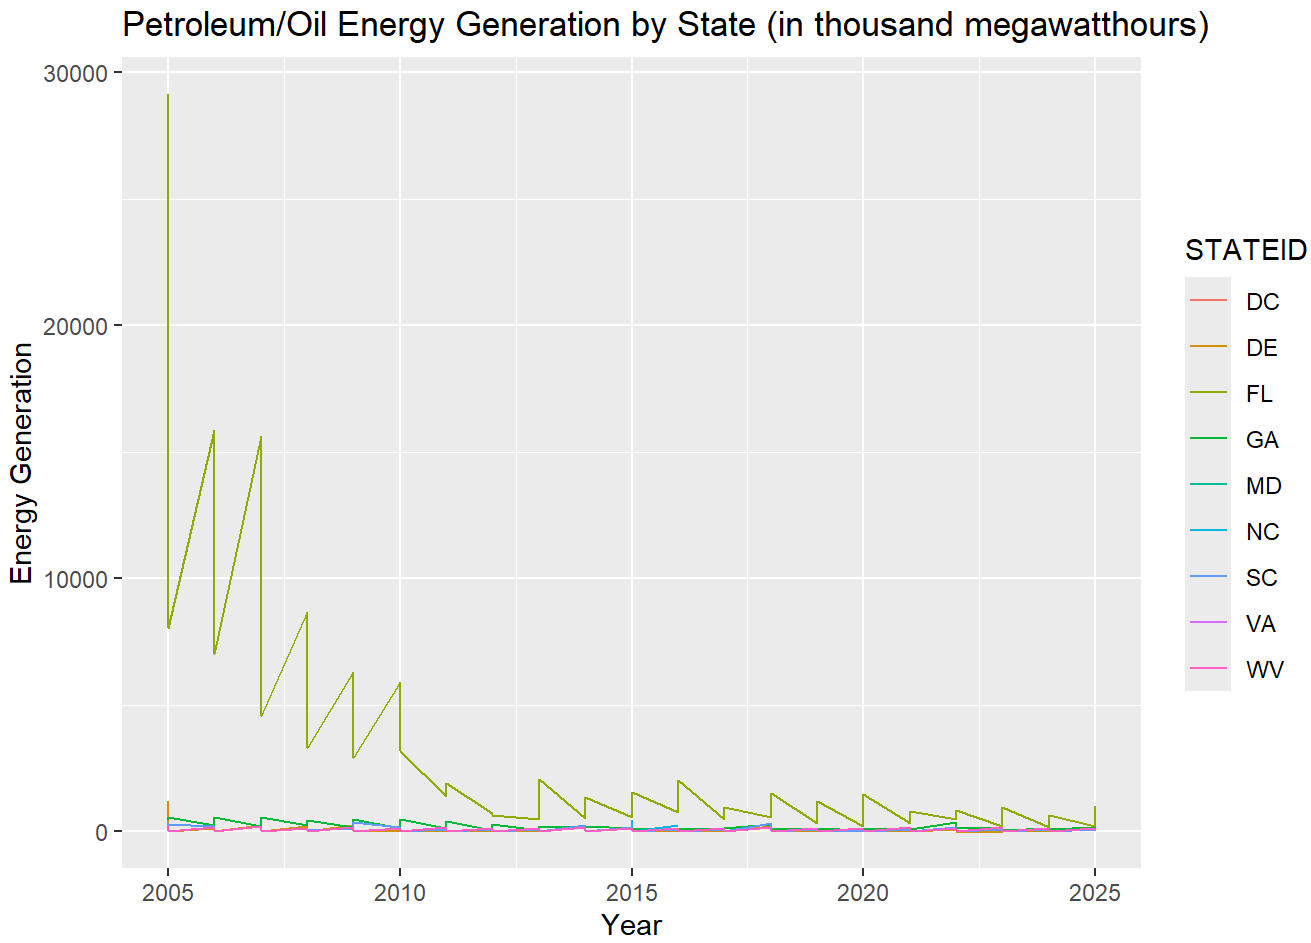

► Code

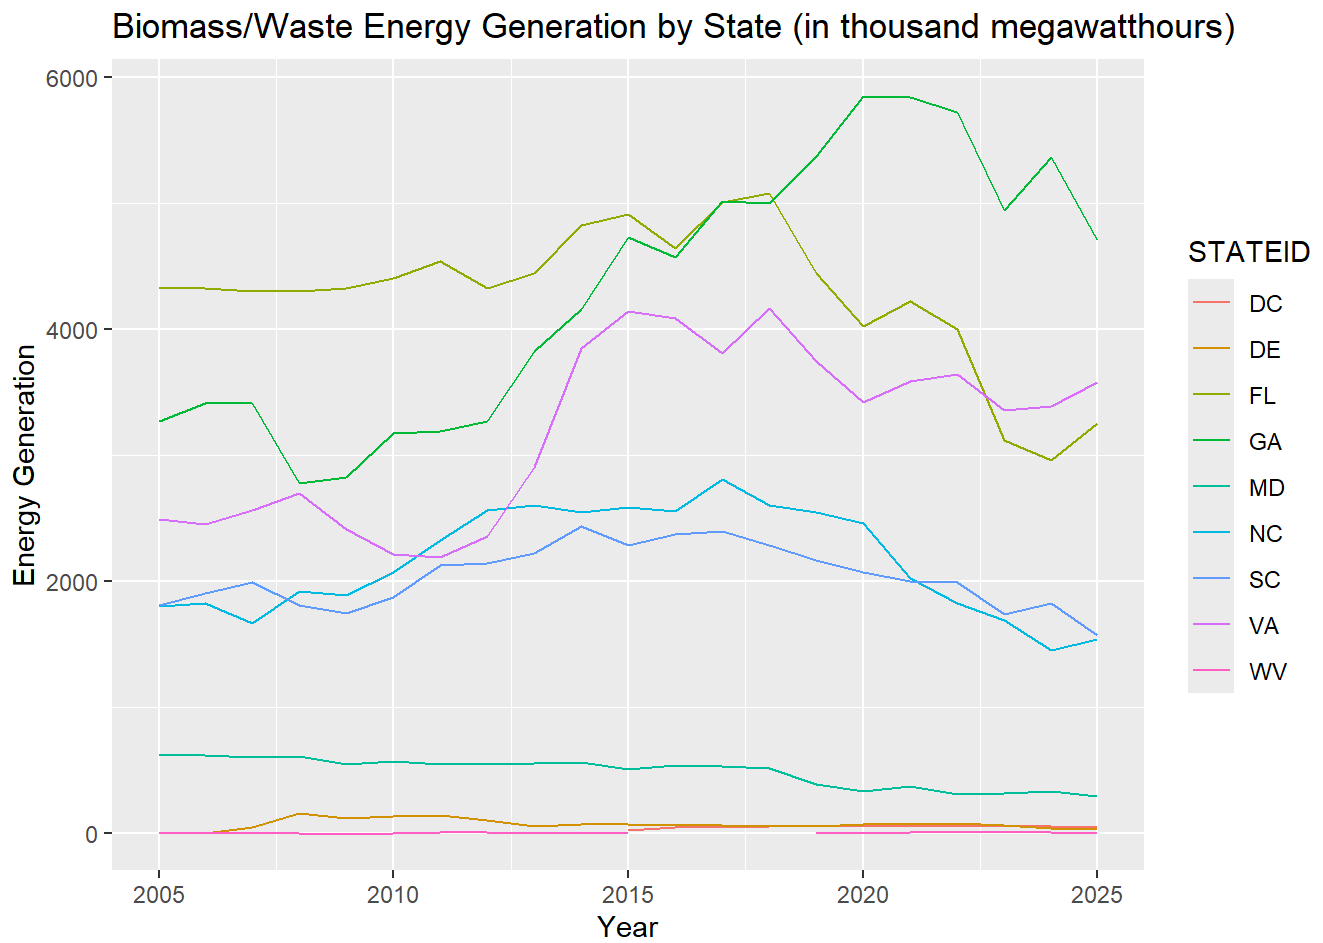

Natural Gas Energy Generation by State (in thousand megawatthours)

► Code

► Code

The `echo: false` option disables the printing of code (only output is displayed).
